COURSE CODE: Darwin_1

Studying Darwin

<http://www.open.edu/openlearn/nature-environment/natural-history/studying-darwin/content-section-0>

Course summary

This unit brings together a collection of units from the OpenLearn site that would be of interest to anyone wishing to study Darwin's theory of evolution and natural selection and how his work has gone on to influence other work around this theory.

Learning outcomes

By completing this course, the learner should be able to:

- understand Darwin's theory of evolution and natural selection
- recognise how his theory has influenced other work in this area and beyond.

Completed study

The learner has completed the following:

Section 1

Evolution and natural and artificial selection

Section 2

Animals at the extremes

Section 3

Studying mammals

Section 4

How Darwin has influenced others

Section 5

Conclusion
