

Statement of participation

Michael Frank

has completed the free course including any mandatory tests for:

Numbers: An introduction to subtraction

This 1-hour free course was designed as a practical aid to building fast and accurate subtraction skills in mathematics and statistics.

Issue date: 23 August 2018

COURSE CODE: Sub_1

Numbers: An introduction to subtraction

<http://www.open.edu/openlearn/science-maths-technology/mathematics-and-statistics/mathematics-education/numbers-introduction-subtraction/content-section-0>

Course summary

Do you want to improve your ability to subtract one number from another, especially if decimals are involved, without having to rely on a calculator? Numbers: An introduction to subtraction, is a free course that will help you get to grips with subtraction and give you some practice in doing it.

Learning outcomes

By completing this course, the learner should be able to:

- subtract one number from another
- subtract using decimals
- practise your subtraction skills.

Completed study

The learner has completed the following:

Section 1

Ways of expressing subtraction

Section 2

Subtracting in your head

Section 3

Subtraction rules – order matters

Section 4

Subtracting on paper

Section 5

Example of a straightforward subtraction

Section 6

Subtracting when you have to borrow

Section 7

Subtracting decimals by lining them up

Section 8

Get some practice

Section 9

Subtracting small numbers

Section 10

Conclusion
